

## Product overview and comparison tables

Easy selection of the right components

# Reliability and quality for professionals

Components of the market leader in many areas

Honeywell's business unit „Cooling Solutions“ is specialized in the development and production of high quality cooling components.

For our customers that means: a broad choice of many innovative and well established expansion valves, solenoid valves and filter driers as well as a good range of other cooling components.

In Mosbach, Germany product managers, the sales department, development engineers and the production are working close together focusing on the highest level of customer satisfaction through optimal products.

To achieve this goal, H.O.S., the Honeywell Operating System, was developed. H.O.S. stands for a big bundle of methods, principles and procedures which are defining operating standards and processes for all staff members.

Thereby we work extremely

- **CUSTOMER ORIENTED:**  
We guarantee highest German and International quality standards as well as a fast delivery performance.
- **FLEXIBLE:**  
Through our modular system we are able to efficiently produce large numbers of customized variants.
- **FAST:**  
We also produce with minimal order quantities and short tooling times.

Put us on the test and start the comparison.

To facilitate this you can find complete comparative tables with products of different manufacturers on the following sites of this brochure.

# Expansion valves

## Mature valves for various conditions

**Expansion Valves are used to** expand liquid refrigerant from a higher pressure and a higher temperature to a lower pressure and a lower temperature. As a controller for superheat, Expansion Valves control the refrigerant mass flow depending on evaporating pressure and temperature at the outlet of the evaporator. They adjust the quantity of the injected refrigerant exactly and guarantee an economic function by optimal use of the evaporator surface.

### Thermostatic Expansion Valves with fixed orifice

Thermostatic Expansion Valves with fixed orifice are used preferentially for serial produced systems. Typical applications are e.g. heat pumps, chiller units, refrigerated cabinets, deep freezers, freezers, fermentation interrupters, ice and cream machines, compact units for cooling and air-conditioning.

- Modular system with flexible construction - customized versions possible
- No charge migration - all valves with warm thermo head
- Optimized capacity adjustment due to small orifice graduation

### Thermostatic Expansion Valves with interchangeable orifice cartridges

Thermostatic Expansion Valves with interchangeable orifice cartridges are used preferentially for general refrigeration and for serial produced systems. They are typically used in plants with one or more refrigerant circuits such as refrigerated cabinets, ice and cream machines, milk cooling units, cold stores, air conditioning systems and heat pumps.

- High flexibility due to modular system
- No charge migration - valves with adsorber charge or warm thermo head
- Optimized capacity adjustment due to small orifice graduation

### Series AEL

Adjustable evaporating pressure, solder connections, internal pressure equalization, fixed orifice, bypass optional.

### Series AMV(X)

Adjustable evaporating pressure, flare connections, internal pressure equalization, interchangeable orifice cartridges.

### Series TLK 0.3 - 2

Internal pressure equalization, MOP charge, warm thermo head, fixed superheat setting, solder connections, fixed orifice, orifice size 0.3 to 2.0, bypass optional.

### Series TLE(X) 0.5 - 4.5

Internal pressure equalization, combi adsorber charge for several refrigerants, MOP charge at deep freeze applications, warm thermo head, adjustable superheat setting, solder connections, fixed orifice, orifice size 0.5 to 4.5. Customized versions possible, bypass optional.

### Series TLESX 4.75 - 6

External pressure equalization, MOP charge, warm thermo head, adjustable superheat setting, Single Port, solder connections, fixed orifice, orifice size 4.75 to 6.

### Automatic Expansion Valves

Automatic Expansion Valves expand the refrigerant and keep the adjusted evaporation pressure at a constant level. They are typically used for plants with single injected evaporators and without liquid receiver, such as air conditioners, dehumidifiers, air driers, water coolers and ice-making machines.

- Constant pressure valves
- Flexible construction - customer specific adjustments possible
- Honeywell - one of the few suppliers for Automatic Expansion Valves

## Series TLEX 4.75 - 11

External pressure equalization, MOP charge, warm thermal head, adjustable superheat setting, Balanced Port, solder connections, fixed orifice, orifice size 4.75 to 11.

## Series TMV(X)

External pressure equalization, combi adsorber charge for several refrigerants, adjustable superheat set., flare connections, interchangeable orifice cartridges.

## Series TMV(X)BL

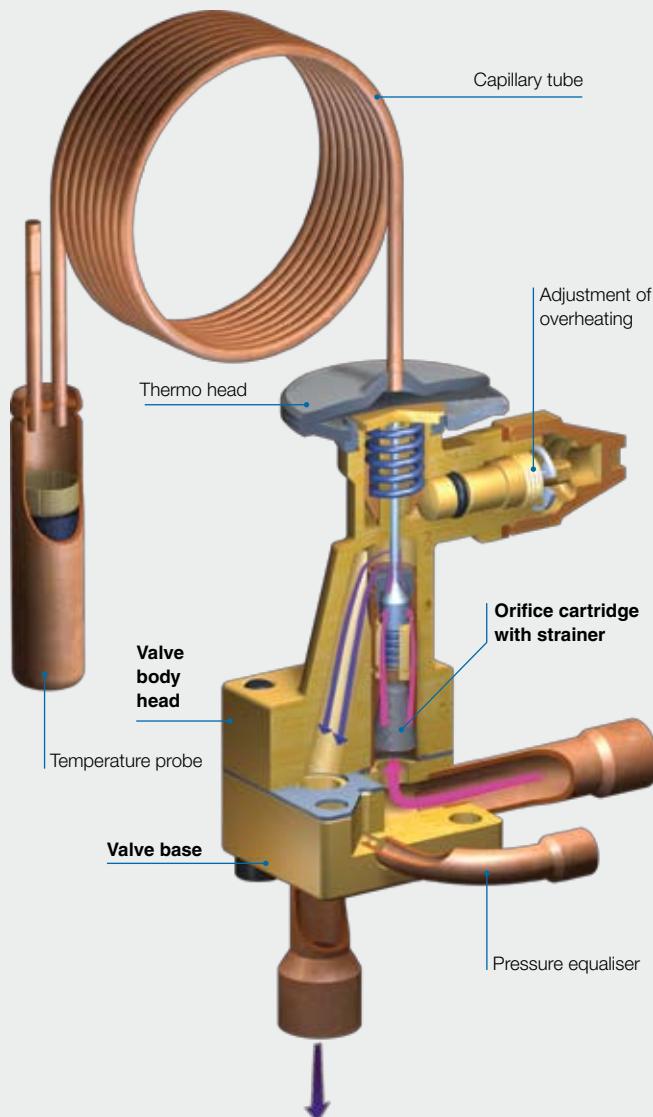

Internal or external pressure equalization, combi adsorber charge for several refrigerants, adjustable superheat setting, inlet flare connection with optional soldering adapter, outlet solder connection, interchangeable orifice cartridges.

## Series TMVL(X)

Part programme valve, one valve body head for solder base with internal or external pressure equalization, combi adsorber charge for several refrigerants, adjustable superheat setting, interchangeable orifice cartridges.

## Series TMX

Part programme valve, valve body head to be combined with various bases and orifice cartridges, MOP- or liquid charge, warm thermo head, external pressure equalization in the valve body head, adjustable superheat setting, with Balanced Port, interchangeable orifice cartridges.

**Expansion valve TMVL(X)**

# Comparative table expansion valves

**Series TLK / TLE / TLEX / TLESX** with fixed orifice

Capacity at:  $t_0 = +5^\circ\text{C}$ ,  $t_c = +32^\circ\text{C}$ , subcooling = 4 K

\* For explanations on these series see page 4-5. Please note also that these series of Honeywell could also come with other technical differences (length, weight, maximum pressures, etc.) Subject to change without notice · EN3H-0375GE23 R0709

# Comparative table expansion valves

**Series TMX with changeable orifice**

Capacity at:  $t_0 = +4^\circ\text{C}$ ,  $t_c = +38^\circ\text{C}$ , subcooling = 1 K

# Solenoid valves

Practice proven design with extreme long lifetime

**Solenoid Valves** are used in general refrigeration and for original equipment as reliable and demand-oriented barrier of line sections. They are suitable for installation into liquid line, hot gas line and suction line of a refrigerating unit.

Honeywell Solenoid Valves impress by following advantages:

- High durability - minimum 1.5 million alternations of load
- Solid protection against humidity by special sealing of the coil
- Modular system: valve housing to be combined with various coil voltages

- Normally closed
- Direct operated: no minimum pressure differential required to open the valve
- Pilot operated: minimum pressure differential of 0.05 bar required to open the valve
- Solder and flare connections possible

## Series MA

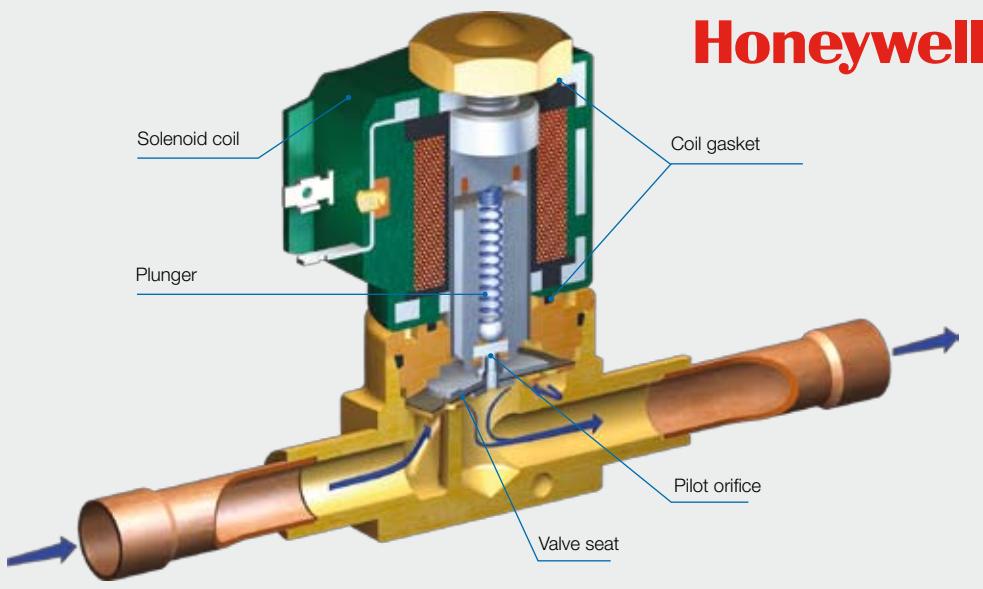

Solenoid Valve, normally closed, direct operated, angle construction, solder connections, kv-value = 0.17 m<sup>3</sup>/h.

## Series MD

Solenoid Valve, normally closed, direct operated, two-way construction, solder or flare connections, kv-value = 0.17 - 0.23 m<sup>3</sup>/h, valve complete with coil for 230 V AC or as part programme valve without coil.

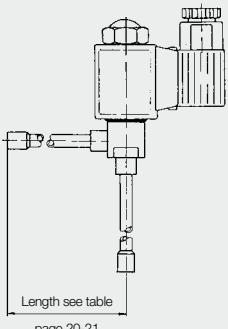

## Series MS

Solenoid Valve, normally closed, pilot operated, two-way construction, solder or flare connections, kv-value = 0.9 - 4 m<sup>3</sup>/h, valve complete with coil for 230 V AC or as part programme valve without coil.

All valves on this double-page spread include one 230 V coil and are normally closed (NC). In our part program we offer all products also separately (except of the MD 102).

The part program includes a choice of additional coils.

\* For explanations on these series see page 18. Please note also that these series of Honeywell could also come with other technical differences (length, weight, maximum pressures, etc.)

\*\* see drawing on page 19

# Sight glasses

Clear view in all installation situations

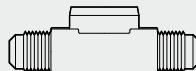

**Sight Glasses** show the condition of the refrigerant flowing through the lines in the refrigerating plant, for example it is possible to see if the refrigerant in the liquid line is free of bubbles. The moisture indicator shows the moisture content of the refrigerant.

Honeywell Sight Glasses stand out by the following characteristics:

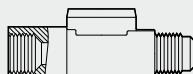

- Minor pressure loss - optimized construction without internals
- Wide field of vision without reflections at the bottom - Refrigerant flow clearly recognizable
- Suitable for all modern refrigerants
- Solder and flare connections

- Most solid with brass body and pressure resistant glass
- Sight glass with moisture indicator to quantity the moisture content in the refrigerant

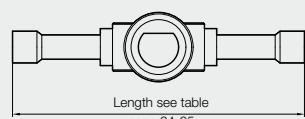

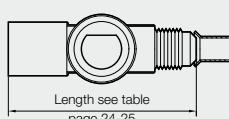

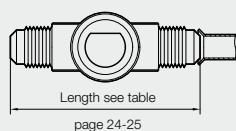

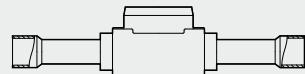

**Series SBI**

**Series SBIA**

**Series SLI**

**S L I            1/2**

**S B I            10**

**S B I A          12**

## Nomenclature

### Sight glasses

**S** = Sight glasses

**L** = Indicator

**B** = Inner and outer

**I** = Connection size (mm, inch)

**A** = Connections (**L**=solder, **B**=flare)

**S** = Sight glasses

## **Series SBI**

Sight Glass with moisture indicator, flare connections, outside threads

SBI

## **Series SBIA**

Sight Glass with moisture indicator, flare connections, outside and inside thread

SBIA

## **Series SLI**

Sight Glass with moisture indicator, solder connections, imperial and metric versions

SLI

## **Moisture indicator**

The colour of the indicator is a measure for the moisture load of the refrigerant inside the plant. The range of indication depends

on the refrigerant. Due to the humidity in the air, the indicator is yellow on delivery. After the installation inside the plant, the indica-

tor will change to green when filling the system with dry refrigerant.

| Refrigerant | Indication Range |              |              |
|-------------|------------------|--------------|--------------|
|             | dry (green)      | transition   | wet (yellow) |
| R22         | < 30 ppm         | 30 – 150 ppm | > 150 ppm    |
| R134a       | < 60 ppm         | 60 – 100 ppm | > 100 ppm    |
| R404A       | < 20 ppm         | 20 – 100 ppm | > 100 ppm    |
| R407C       | < 20 ppm         | 20 – 130 ppm | > 130 ppm    |
| R507A       | < 20 ppm         | 20 – 100 ppm | > 100 ppm    |

Indication temperature: t = 30 °C

### **Green colour: Moisture free.**

Only a moisture-free refrigerant assures no trouble with the expansion valve coming from humidity.

### **Transition:**

When the green colour begins to fade, it is an indication that small quantities of moisture are present. It is recommended to change the filter drier.

### **Yellow colour: Wet.**

The refrigerant is loaded with moisture higher than the stated values. A change of the filter drier is required.

\* For explanations on these series see page 23. Please note also that these series of Honeywell could also come with other technical differences (length, weight, maximum pressures, etc.)

\*\* Honeywell uses the thread size for flare connections always. Flare connections of competitive products are given here in connection sizes of the tubes.

\*\*\* see drawing on page 22.

# Filter drier

## Premium filters with high filter performance

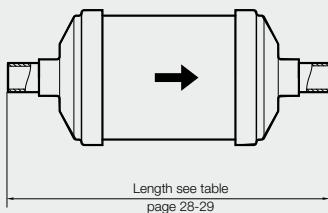

**Filter Drier** are used for filtering impurities out of the refrigerant and for moisture removal. They are placed in the liquid line of air-conditioning, refrigeration and deep freeze systems.

Honeywell Filter Driers stand out by the following characteristics:

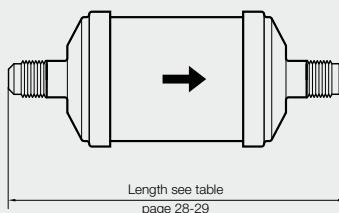

- Bulk drier with minor pressure loss – High abrasion resistance
- High cooling capacity
- Drying medium: 3 Å molecular sieve and activated alumina
- High water absorbing capacity

- Reliable filter performance
- Continuous range with solder or flare connections
- Low pressure drop
- Any mounting position in the liquid line possible

### Series FF

FF Solder connection

FF Flare connection

FF 05 2  
FF 08 3 S  
FF 16 4 MMS

### Nomenclature Filter drier

Connections (S=solder in inch, MMS=solder in mm, 0=flare)

Connection size in 1/8"

Filter size

FF = filter drier

## Series FF ... S/MMS

Filter Drier with solder connections  
(S = imperial; MMS = metric),  
drying agent in bulk

## Series FF ...

Filter Drier with flare connections,  
drying agent in bulk

**FF** Solder connection

**FF** Flare connection

## Water adsorption rate [g]

# Comparative table filter drier

## Series FF

Bi flow drier / drier receiver and other filters or driers are available on enquiry.

\* For explanations on these series see page 26-27. Please note also that these series of Honeywell could also come with other technical differences (length, weight, maximum pressures, etc.)

\*\* Honeywell uses the thread size for flare connections always. Flare connections of competitive products are given here in connection sizes of the tubes.

\*\*\* see drawing on page 26.

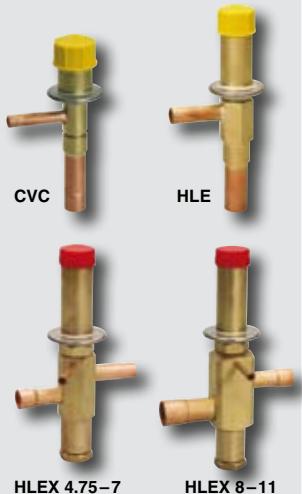

# Additional cooling components

## Honeywell - Application experience with cooling components

### Hot Gas Bypass Valves

Honeywell Hot Gas Bypass Valves are used to adjust the compressor capacity to the actual evaporator capacity in a refrigerating plant. The Hot Gas Bypass Valve can be installed in a bypass tube between hot gas line and suction line. The suction pressure is downward limited by flowing hot gas from the high pressure to the low pressure side e.g. as freezing protection. The controllers are suitable for plants in general refrigeration and for original equipment such as dehumidifiers, air driers, water coolers or ice machines.

#### Hot Gas Bypass Valves

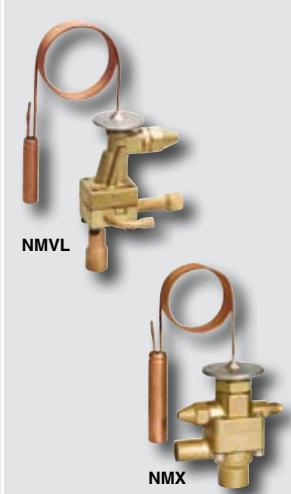

### Liquid Injection Valves

Liquid Injection Valves are used in refrigeration applications to reduce the temperature of the suction gas. Depending on the superheat of the compressor suction gas, liquid refrigerant is injected into the suction line. Thereby the suction gas is cooled down. Honeywell Liquid Injection Valves can be combined optimally with Hot Gas Bypass Valves.

- High flexibility due to modular system
- Interchangeable orifice cartridges
- Optimal adjustment to cooling capacity due to small orifice graduation
- To be used with bases and orifice cartridges of Honeywell Expansion Valves

#### Liquid Injection Valves

### Check Valves

Check Valves are installed in the liquid, hot gas or suction line of a refrigerated plant. They prevent flow reversion in the circuit e.g. caused by liquid migration. This is realized by a spring loaded piston which opens the valve only in one direction.

### Vibration Absorbers

Honeywell Vibration Absorbers are used to minimize vibrations on the pipes caused by the compressor. Furthermore they decrease noise and compensate small thermal distensions.

#### Check Valves

#### Vibration Absorbers

# Electronic cooling components

## Honeywell - Optimal control of refrigerating plants

### Cold Store Controls

Honeywell Cold Store Controls are used for refrigeration and deep freeze systems. They control the cold store temperature by switching the compressor and evaporator fan depending on the adjusted parameters.

#### Cold Store Controls

PCR 300

PCR 310

### Thermostats

Honeywell Thermostats are used for refrigeration and deep freeze systems, heat pumps as well as for general thermostat applications. The Electronic Thermostats can be used for cooling and heating applications in a temperature range of -55 °C to +50 °C.

### Temperature Displays

Honeywell Electronic Temperature Displays are used in refrigeration and deep freeze systems, in cold stores and as general temperature display.

### Thermostats and Temperature Displays

PCR 100

PCR 110

PTI 610

### Individual Solutions from Honeywell

# Overview of types

To shortly give you an overview of how our products are designed we displayed the main types here. More detailed information can be found on our website or by just calling us.

## Automatic Expansion Valves

AEL

AMV(X)

## Thermostatic Expansion Valves with fixed orifice

TLK

TLE(X) 0.5-4.5

TLESX

TLEX 4.75-11

## Thermostatic Expansion Valves with interchangeable orifice

TMV(X)

TMV(X)BL

TMVL(X)

TMX

## Filter Drier

FF

FF

## Solenoid Valves

MA

MD

MS

## Sight Glasses

SBI

SBIA

SLI

# Our online service

On the internet you can find detailed information about the cooling components of Honeywell.

[www.honeywell-cooling.com](http://www.honeywell-cooling.com)

- Link Products

Technical information, data sheets, mounting guidelines and certificates to download

- Link Selection Software

Selection software „Valve Tool“ to download and for free usage

- Link Contacts

Request of additional information, world-wide contacts

The screenshot displays three main sections of the Honeywell Cooling Solutions website:

- Products:** A sidebar menu includes "Exhaust Valves", "Hot Gas Bypass Valves", "Liquid Injection Valves", "Reduced Valves", "Check Valves", "Bypass Classics", "Filter Valves", "Vibration Dampeners", "Diaphragm Controls", "C-Catalogue", "Selection Software", "Contacts", "Links", and "Imports". Below the menu are flags for France, Germany, Italy, Austria, and Switzerland, followed by "V.3.3.5".
- Cooling Solutions:** This section features a large image of various valves and fittings. Text below states: "Honeywell Cooling Solutions are used successfully worldwide in all refrigeration, airconditioning and heat pump applications." It also mentions: "Honeywell is a certified company by ISO Quality and environmental management systems work according ISO 9001:2000 and ISO 14001:2004." A "Leaflet" button leads to "Cooling Components".
- Honeywell Selection Software "Valve Tool":** A pop-up window titled "Honeywell Selection Software "Valve Tool"" shows a screenshot of the software interface. Text below says: "You can download and install the Honeywell Selection Software on your computer. Please follow this installation notes...". It also mentions: "To use the internal database software, Microsoft® Office (Word and Excel) must be installed on your computer. If you do not have these Microsoft products, please go to the Microsoft website (http://www.microsoft.com) and download them for free." A "Please follow the installation notes..." link is present.

**Bottom of the page:**

- Cooling Solutions:** A banner at the bottom left says "Welcome to the Electronic Catalogue of Honeywell Cooling Solutions". It features a circular logo with "HONEYWELL" and "COOLING SOLUTIONS". Text below says: "You will find a lot of detailed information about our products including data sheets and mounting instructions in PDF format." A "Leaflet" button is available.
- Contact:** A world map shows "Wholesalers / Affiliates worldwide" with a note: "...please click on a country or a flag". Below the map are links: "Request for further information...", "How to find us...", "Acknowledgements and Current Initiatives", "Information for Distributors", "Honeywell", "Honeywell International", "Privacy Statement", "Terms & Conditions", "Photo Galleries", "Press Room", "Contact Us", "Email: cooling-europe@honeywell.com", and "Internet: www.honeywell-cooling.com".

Please note:
